Welcome from the General Chairman

Prof. Erik G. Larsson
Linköping University, Sweden

Welcome to the 49th Asilomar Conference on Signals, Systems, and Computers!

It is a privilege for me to serve as General Chair of the Asilomar conference this year. Asilomar is a unique conference and I believe what makes it so special is the combination of an exceptional quality of the technical presentations and papers, the congenial atmosphere that forms around the social events, and the opportunity for long outdoor walks along the California coast. For me personally, Asilomar stands out as the one conference that I have tried, and am trying to consistently attend since I first participated fifteen years ago.

We are looking forward to an exciting technical program that spans two and a half days. All credit for preparing the technical program goes to the Technical Chair, Prof. Timothy Davidson and his team of area chairs: Wei Yu, David Love, Randall Berry, Bhaskar Rao, Gerald Matz, Aleksandar Jeremic, Warren Gross, Shahram Shirani and Keshab Parhi (vice chair). I would like to thank Tim and his team for assembling the program, which this year consists of 363 papers, of which 158 are invited. Among these papers, 78 were submitted to the student paper contest and a list of finalists have been selected. The finalists in the student contest will present their contributions as posters to a committee of judges on Sunday afternoon and of course, everyone is invited to attend. The top-three ranked papers will then be awarded prizes at the Monday plenary session.

The plenary talk this year will be given by Prof. Frank R. Kschischang from the University of Toronto. Frank is an authority in information theory and coding with applications to wireline, wireless as well as optical communications. The topic of his talk is applications of the nonlinear Fourier transform, a signal analysis technique first introduced by mathematicians and physicists in the 1970s and now used to analyze optical communication links, where nonlinearities are present. I am greatly excited about this talk and the opportunity for us all to learn from a world-renowned expert about this advanced and useful tool.

It has been an honor to serve as General Chair, and I hope that you will all enjoy the conference.

Fiber-Optic Communication via the Nonlinear Fourier Transform

Frank R. Kschischang
University of Toronto, Canada

Abstract

In this work we explore some of the potential fiber-optic data transmission applications of the nonlinear Fourier transform (NFT), a signal analysis technique introduced by mathematicians and physicists in the 1970s. Just as the usual Fourier transform converts linear convolution to multiplication, the NFT transforms the action of the ideal (noiseless, lossless) nonlinear Schrödinger equation (and other integrable evolution equations) to the action of a multiplicative filter in the nonlinear frequency domain. One potential application is a nonlinear analogue of linear frequency-division multiplexing that, unlike many other fiber-optic transmission strategies, deals with both dispersion and nonlinearity unconditionally, without the need for dispersion or nonlinearity compensation methods.

(Joint work with Mansoor I. Yousefi and Siddarth Hari.)

Biography

Frank R. Kschischang is the Distinguished Professor of Digital Communication in the Department of Electrical and Computer Engineering at the University of Toronto, where he has been a

faculty member since 1991. He received the B.A.Sc. degree (with honors) from the University of British Columbia, Vancouver, BC, Canada, in 1985 and the M.A.Sc. and Ph.D. degrees from the University of Toronto, Toronto, ON, Canada, in 1988 and 1991, respectively, all in electrical engineering. During 1997-98, he was a visiting scientist at MIT, Cambridge, MA; in 2005 he was a visiting professor at the ETH, Zurich, and in 2011 and again in 2012-13 he was a visiting Hans Fischer Senior Fellow at the Institute for Advanced Study at the Technical University of Munich.

His research interests are focused primarily on the area of channel coding techniques, applied to wireline, wireless and optical communication systems and networks. In 1999 he was a recipient of the Ontario Premier's Excellence Research Award and in 2001 (renewed in 2008) he was awarded the Tier I Canada Research Chair in Communication Algorithms at the University of Toronto. In 2010 he was awarded the Killam Research Fellowship by the Canada Council for the Arts. Jointly with Ralf Koetter he received the 2010 Communications Society and Information Theory Society Joint Paper Award. He is a recipient of the 2012 Canadian Award in Telecommunications Research. He is a Fellow of IEEE, of the Engineering Institute of Canada, and of the Royal Society of Canada.

During 1997-2000, he served as an Associate Editor for Coding Theory for the IEEE TRANSACTIONS ON INFORMATION THEORY, and since January 2014, he serves as this journal's Editor-in-Chief. He also served as technical program co-chair for the 2004 IEEE International Symposium on Information Theory (ISIT), Chicago, and as general co-chair for ISIT 2008, Toronto. He served as the 2010 President of the IEEE Information Theory Society.
